

**Design Features include:**

- Split-in-half flex element design for simplified assembly and disassembly
- Torsionally soft flex element cushions shock loads and vibration, extending equipment life
- Interchangeable hubs allow for reduced inventory
- Polyurethane-to-metal bond eliminates assembly and slippage problems associated with mechanically clamped designs
- Material flexing design allows visual inspection during operation
- Element "V" Notch design provides a uniform failure area for overload protection if required

**Applications:**

- Pumps
- Compressors
- Industrial fans
- Mixers

**Industry Compliant:**

- ATEX II 2GD c T5

**Special design options:**

- Rexnord Viva Spline Bore Hub
- Rexnord Viva Positive Drive Coupling
- Rexnord Viva Keyless Hub / Bushing Design
- Limited end float
- Bolt-on brake

# Rexnord Viva V Elastomer Coupling

**Customer-focused solutions.**

**Reliable Performance.**

**Trusted Brands.**

You want a trusted name when it comes to providing engineered power transmission products that improve productivity and efficiency. Rexnord® provides superior products for your industrial applications world wide. We work closely with you to reduce maintenance costs, eliminate redundant inventories and prevent equipment downtime.

**Rexnord Viva V**

The Rexnord Viva® is a unique general purpose elastomer coupling with split element design providing easy assembly and replace-in-place service. Available in close coupled and spacer designs. These unique designs permit faster installation and reduced inventories by providing multiple distance between shaft ends using the same elements and hubs. Rexnord Viva V design is used on close coupled applications.

ATEX II 2GD c T5

Torque Demands Driven Machine	Typical Application for Electric Motor or Turbine Driven Equipment	Typical Service Factor
	Constant torque such as centrifugal pumps blowers and compressors	1.0
	Continuous duty with some torque variations including plastic extruders and forced draft fans	1.5
	Light shock loads from metal extruders, cooling towers and log haulers	2.0
	Moderate shock loading as expected from a car dumper, stone crusher, vibrating screen	2.5
	Heavy shock load with some negative torques from reciprocating pumps, compressors, reversing turnout tables	3.0
	Frequent torque reversals such as reciprocating compressors with frequent torque reversals which do not necessarily include reverse rotations	Consult Rexnord Engineering
